Getting Started Guide

This guide helps you to go through initial configuration and basic set-up of Hillstone devices. The intended reader is your company's network administrator.

This guide is used when you have finished mounting your device. After following the steps in this guide, your private network will be able to access Internet. For security functions, you will need to read the User Guide (WebUI User Guide or CLI User Guide).

You may configure your firewall in the following sequence:

- 1. "Initial Visit to Web Interface" on Page 2
- 2. "Preparing the StoneOS System" on Page 3, including:
 - "Installing Licenses" on Page 3
 - "Creating a System Administrator" on Page 3
 - Adding Trust Hosts" on Page 4
 - "Upgrading StoneOS Firmware" on Page 4
 - "Updating Signature Database" on Page 5
- 3. "Connecting to Internet Under Routing Mode" on Page 6
- 4. "Restoring to Factory Settings" on Page 9

Initial Visit to Web Interface

Interface eth0/0 is configured with IP address 192.168.1.1/24 by default, it is open to all connection types. For the initial visit, use this interface.

To visit the web interface for the first time:

1. Go to your computer's Ethernet properties, set the IPv4 protocol as below.

Internet Protocol Version	4 (TCP/IPv4) Properties 🛛 🗙
General	
You can get IP settings assigned autor this capability. Otherwise, you need to for the appropriate IP settings.	natically if your network supports ask your network administrator
O <u>O</u> btain an IP address automatical	ly 🔤
• Use the following IP address:	
IP address:	192.168.1.2
S <u>u</u> bnet mask:	255 . 255 . 255 . 0
Default gateway:	192.168.1.1
Obtain DNS server address auton	natically
• Use the following DNS server add	resses:
Preferred DNS server:	
<u>A</u> lternate DNS server:	
Validate settings upon exit	Ad <u>v</u> anced
	OK Cancel

- 2. Connect an RJ-45 Ethernet cable from your computer to the eth0/0 of the device.
- 3. In your browser's address bar, type "http://192.168.1.1" and press Enter.
- 4. In the login interface, type the default username and password: hillstone/hillstone.
- 5. Click Login, and the device's system will initiate.

Installing Licenses

Licenses control features and performance.

Before installing any license, you must have obtained the license code from sales person.

To install a license:

- 1. Go to System > License.
- 2. Choose one of the two ways to import a license:

Upload License File	
🔘 Manual Input	
	Browse
OK clear	

- >>> Upload License file: Select the radio button, click Browse, and select the license file (a .txt file).
- >> Manual Input: Select the radio button, and paste the license code into the text box.
- 3. Click OK.
- 4. To make the license take effect, reboot the system. Go to System > Device Management > Options, click Reboot.

Creating a System Administrator

System administrator has the authority to read, write and execute all features in this system.

To create a system administrator:

1. Go to System > Device Management > Administrator.

2.	Click New,					
	Configuration				3	×
	Name:	Admin		(4-31) characters		÷.
	Role:	Administrator	*			
	Password:	•••••		(4-31) characters		
	Confirm Password:					
	Login Type:	Console SSH HTTPS	V Telnet			
	Description:	Select All	(0	-127) characters		
						÷
				ОК	Cancel	

In the Admin Configuration dialog box, enter values

Option	Value
Name	Admin
Role	Administrator
Password	123456
Confirm Pass- word	123456
Login Type	Select Telnet, SSH, HTTPand HTTPS.

3. Click OK.

Note: The system has a default administrator "hillstone", which cannot be deleted or renamed.

Adding Trust Hosts

Trust host is administrator's host. Only computers included in the trust hosts can manage the system.

To add a trust host:

- 1. Go to System > Device Management.
- 2. Select Trust Host tab, and click New.

Trust Host Configura	tion					×
Type:	IP/Netmask		🔘 IP Range			
IP:	192.168.1.2		/ 24			
Login Type:	🔽 Telnet	SSH	V HTTP	VH	ITTPS	
				ОК	C	ancel

In the Trust Host Configuration dialog box, enter value

Option	Value
Туре	Select IP/Netmask
IP	192.168.1.2/24
Login Type	Select all: Telnet, SSH, HTTP and HTTPS

3. Click OK.

Upgrading StoneOS Firmware

Note: Back up your configuration files before upgrading your system.

To upgrade your system firmware:

- 1. Go to System > Upgrade Management.
- 2. Select Browse and choose the new image from your local computer.

- 3. Click Reboot to make new firmware take effect, and then click Apply.
- 4. The system will automatically reboot when it finishes installing new firmware.

Updating Signature Database

Features that require constant signature updates are license controlled. You must purchase license in order to be able to update signature libraries. By default, the system will automatically update databases on a daily basis.

To update a database:

- 1. Go to **System > Upgrade Management**, and click the <Signature Database Update> tab.
- 2. Find your intended database, and choose one of the following two ways to upgrade.
 - >>> Remote Update: Click Update , the system will automatically update the database.
 - Local Update: Select Browse to open file explorer, and select your local signature file to import it into the system.

In routing mode, the device is working as a gateway and router between two networks. This section shows how to connect and configure a new Hillstone device in route mode to securely connect the private network to Internet.

To get your private network access to Internet through a Hillstone device:

Step 1: Connecting to the device

- 1. Connect one port (e.g. eth0/1) of Hillstone device to your ISP network. In this way, "eth0/1" is in the untrust zone.
- 2. Connect your internal network to another Ethernet interfaces (e.g. eth0/0) of the device. This means "eth0/0" is connected to the trust zone.
- 3. Power on the Hillstone device and your PCs.
- If one of the internal interfaces already has been configured with an IP address, use a browser to visit that address from one of your internal PCs.
 If it is a new device, use the methods in "Initial Visit to Web Interface" on Page 2 to visit.
- 5. Enter "hillstone" for both username and password.

Step 2: Configuring interfaces

- 1. Go to Network > Interface.
- 2. Double click eth0/1.

In the Ethernet Interface dialog box, enter values

Option	Value
Binding Zone	L3-zone
Zone	untrust

Option	Value
Туре	Static IP
IP Address	202.10.1.2 (public IP address provided by your ISP)
Netmask	255.255.255.0
Management	Select protocols that you want to use to access the device.

3. Click OK.

Step 3: Creating a NAT rule to translate internal IP to public IP

- 1. Go to Policy > NAT > SNAT.
- 2. Select New

Basic	Requirements	hered as				
	VIIILISI ROOME	Eusen	v

	Sticky: If "Sticky" is sete Others HA group: Description:	Chade de la sessions of	one sout (0-63) c	ce IP will be mappe haracters	d to a fixed IP	
	Sticky: If "Sticky" is sele Others HA group: Description:	Check, all sessions of @ 0	one sout (0-63) c	ca IP will be mappe hanacters	d to a fixed IP	

In the SNAT Configuration dialog box, enter values

Option	Value
Source Address	Address Entry, Any
Destination Address	Address Entry, Any
Egress	Egress interface, ethernet 0/1
Translated	Egress IP
Sticky	Enable

3. Click OK.

Step 4: Creating a security policy to allow internal users access Internet.

- 1. Go to **Policy > Security Policy**.
- 2. Click New.

In the Policy Configuration dialog box, enter values.

Source Information				
Zone	trust			
Address	Any			
Destination Infor	Destination Information			
Zone	untrust			
Address	Any			
Other Informatio	Other Information			
Service/Service Group	Any			
APP/APP Group				
Action	Permit			

3. Click OK.

Step 5: Configuring a default route

- 1. Go to Network >Routing > Destination Route.
- 2. Click New.

Destination: Subnet Mask:	0.0.0.0	
Subnet Mask:	0.0.0.0	
Next Hen:		
Next hop.	Gateway	Current VRouter
	Interface	Other VRouter
Gateway:	202.10.1.1	
Precedence:	1	(1-255) , default: 1
Weight:	1	(1-255), default: 1
Description:		(0-63) characters

In the Destination Route Configuration dialog box, enter values.

Option	Value
Destination	0.0.0.0 (means all network)
Subnet Mask	0.0.0.0 (means all subnets)
Gateway	202.10.1.1 (gateway provided by your ISP)

3. Click OK.

Restoring to Factory Settings

Note: Resetting your device will erase all configurations, including the settings that have been saved. Please be cautious!

To restore to factory's default settings, you may use one of the following two ways:

- Restoring using a pin" on Page 9
- Restoring via WebUI" on Page 9

Restoring using a pin

To restore to factory default:

- 1. Power off the device.
- 2. Use a pin to press the CLR pinhole on the front panel; keep pressing and power on the devcie.
- 3. Keep pressing until the STA and ALM indicators on the front panel turn constant red; release the pin. The system will start to reset itself.
- 4. When restoring is complete, the system will reboot automatically.

Restoring via WebUI

To restore to factory settings using Web interface:

- 1. Go to System > Configuration File Management.
- 2. Click Backup Restore.
- 3. In the prompt, click Restore.

you can backup the current configu	rations.	fermion are of accord density of
Note: Configurations take effect a	fter system rebooting.	
Back up Current Configurations		
Description:		(0-255) characters
	start	
Restore Configuration		
Roll back to Saved C	Select Backup Syst	Upload Configuratio
Restore to Factory D	Restore	
Restore to Factory D	Restore	

- 4. Click OK to confirm.
- 5. The device will automatically reboot and be back to factory settings.
